

AUDITORY NEUROPATHY SPECTRUM DISORDER (ANSD): IMPLICATIONS FOR EVALUATION AND MANAGEMENT

Dr. Malik Safieh, AUD, Jeddah Institute for Speech and Hearing, Jeddah, KSA.

ANSD is often a misunderstood hearing disorder. Problems in identification and intervention are exacerbated in the emerging / developing world. Although there have been a great focus and attention on clinical research related to ANSD, controversies still exist and many questions are not yet answered. The goal of this lecture is to outline and summarize the main concepts of ANSD as well as reviewing various available management strategies.

Learner outcome:

Understand auditory (ANSD)

Learn about the techniques used to identify patients with ANSD

Learn about different theories and practices

Review of the various available management strategies
